

# Austrian Flags anim. XP10.11 V.1301

## Description:

On many airport you can see flags. So i built the flags of the 9 Austrian countries and the Austrain flag. They are moving in the wind, so don't give them an other orientation than 0°!

The flagpole is 8m high, the flag 1 by 5 meters.

## Installation:

Copy all files into one directory in your airport-directory (e.g. under \objects\flags) and use WED to place them.

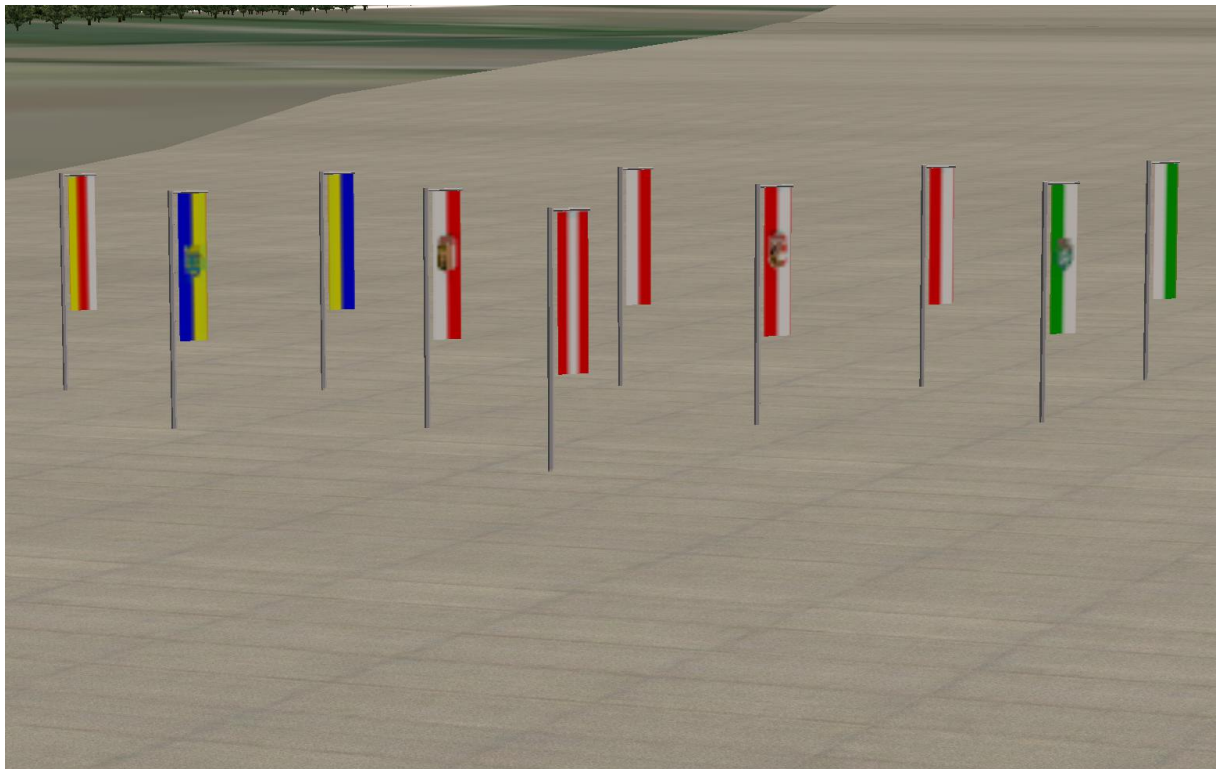

## What you get:

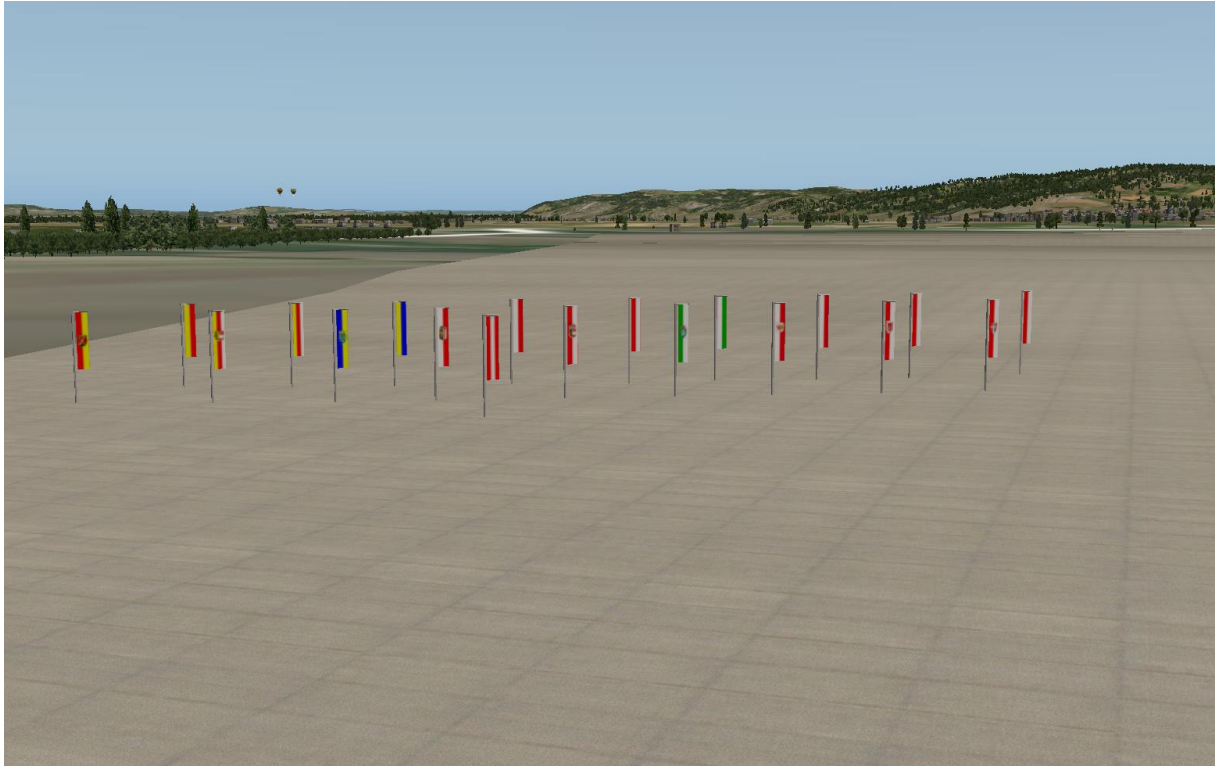

one Austrian flag (red-white-red):	Flag_Oe_plain.obj
all Austrian countries:	Flag_XXX_plain.obj
all Austrain countries with coat of arms:	Flag_XXX_full.obj
where XXX means the country.	

## **Tested with: XP10.11**

If you have any suggestions or you want to receive the sources (built with SketchUp and Gimp), write to: [oe3gsu@oevsv.at](mailto:oe3gsu@oevsv.at)

Please feel to improve my work. But: ... please send me a short notice or the new sources. I want to learn from you!

Released in the public domain. Fell free to modify, improve, correct, and Have fun!
